```

Latest touch histories, edits, and most work completed

- Matthew Rollings
- Scott Alexander-Bown.

Least touches

- Mohammed Ezzat – few touches; after 2016, his name ceases to appear which reasonably indicates their departure from the project
- Ali Waseem – few touches; indicate either temporary participation in the project, less work done, or completion of their part in the project.

While this lab isn't fully complete, the git commands I found useful were the *git status*, the more specific git pull/push commands, and *git branch -a*. These commands allowed me to see what files changed and needed to be added, push and pull when git issues occurred, and also view all of the branches on the local repository.
